

WANTED!

Support us in Finding Dory!

With Disney's animated feature film 'Finding Dory', love and demand for the palette surgeonfish will boom.

Missing Population Data

Most palette surgeonfish (*Paracanthurus hepatus*) on the market originate in Indonesia or the Philippines. However, Dory's population status in these countries is unknown. Thus it remains unclear how many specimens can be taken from the wild without endangering local populations.

DORY

A study to bring clarity

ESAIA e. V. proposes to task scientists with collecting and evaluating fishery and population status data for *P. hepatus*. However, this research needs funding.

How can we help?

Turn your love for marine wildlife into support for this meaningful project that contributes to a sustainable marine aquarium trade. In the movie, it's Nemo helping Dory in its search. So why not dedicate a fraction of the price of each sold/bought 'Nemo' to support our project 'Finding Dory's family'?

On behalf of Dory we thank you for your donation!
